TO KEEP YOU AWAKE

## Independence For India

In a radio address a few months ago, the Right Hon. Winston Churchill declared that we would withstand the enemy, "even though he hammered at the gates of India." This was a dramatic phrase, and it is likely that at that time a large portion of his audience thought of it more as a fine piece of oratory than as an ominous warning of what lay ahead. Since then, we have gone to war with Japan, and one by one the Empire's defences in the Far East have fallen, until now the aggressor is indeed close to the very gates of India. At the same time, a crisis has arisen in the long-standing demands of the people of India for Dominion status. These demands have been very closely considered by the British Government, and a plan for complete self-government after the war is now being submitted to the leaders of those factions which are most urgent in their stand for immediate independence.

## A Divided People

The great impediment in the way of self-government for India lies in the divided political life of the country. Powerful groups, notably the Hindus, the Moslems, and the Indian States ruled by native princes, have not agreed among themselves as to the conduct of an independent state, and while this disunion exists, there is danger that a serious internal struggle would follow the creation of a self-governing parliament. Even Indian leaders themselves express small hope that any degree of unity can be reached within the country. At the same time the British Government insists that in granting Dominion status to India, it must see that none of its pledges to minority groups and the depressed classes, are broken. In this connection Mr. Churchill recently stated: "In order to clothe these general declarations with precision, and to convince all classes, races and creeds in India of our sincere resolve, the War Cabinet have agreed unanimously upon conclusions for present and future action which, if accepted by India as a whole, would avoid the alternative dangers. Either that resistance of a powerful minority might impose an indefinite veto upon the wishes of the majority, or that a majority decision might be taken which would be resisted to a point destructive of internal harmony and fatal to the setting up of a New Constitution."

## Will Submit Proposals

The fact that Sir Stafford Cripps was chosen to take the proposals to India, shows the sincerity of the British Government in its desire to reach an understanding on the problem. Sir Stafford's fine work as ambassador to Russia during the period when our relations with that country were of a most delicate nature, and later, during the critical months after Russia's entry into the war, has made him one of the most outstanding figures in British public life to-day. As Lord of the Privy Seal, he has a high and responsible office in the British Government, and it is a tribute to the people of India that he has been sent to discuss their problems, and present Britain's offers to them. Mr. Churchill has said that India is one of the bases from which counter-attacks in the war in the Pacific will be launched. The people of India have already shown a fine spirit in supporting their country's war effort. They are being asked now, not only by the British Government, but by all the other people of the Empire, to carry out the appeal made to them by Lord Linlithgow, their viceroy, "to close ranks and stand shoulder to shoulder against the aggressor." The Empire at large will follow with the deepest interest the delicate mission that has been entrusted to Sir Stafford Cripps, and it is to be hoped that some satisfactory solution may be found whereby the different factions may be able to meet on common ground. At this critical period in the war a united India with its teeming millions would prove an important factor in deciding the issues of the war.

## Hard Up For Men

Mussolini is so hard up for officers that even grandpas will have to serve. The London radio says II Duce has issued a new order, warning that two commissioned officers who were recalled to the colors now will have to serve until they are 70 years old.

Some are born great, some achieve greatness and some have their greatness a tax-money ready ahead of them.

An anti-aircraft gun is known as an "archie" in the ranks of the British Army.

## A Lucky Ship

A 5,000-ton tramp cargo ship, flying the British South African flag, has just completed 10,000 miles of service among the icebergs of the south seas, despite war conditions.

The back-to-the-home movement gets a setback in the announcement that a new buggy with red wheels—quoted at \$80 in the good old days—now costs \$120, and this doesn't include the horse.

Australia produces about one-fourth of the world's supply of wool.

## EQUINE ENCEPHALOMYELITIS

A Short History of the Disease  
Written By Dr. J. S. Fulton, D.V.S.,  
Chief Veterinary Officer

Although the history of equine encephalomyelitis is well known to many, it is well perhaps to review the matter and mention some of the more important findings in connection with the disease that stock owners may fully appreciate, not only the economic side, but the human aspect, that pertains to public health.

Shipping sickness of horses in Saskatchewan was first recognized as such in 1868, when a fairly extensive outbreak occurred. In 1936, for example, it appeared, but in 1937, a second and more extensive epidemic occurred, followed in 1938 by one that was so severe that some 15,000 horses were lost.

It was extremely difficult at first to control the disease since there was no suitable immunizing agent available. In 1938, however, Chick Brey vaccine was introduced, which we have found to be almost 100% effective, in fact it is quite safe to use on horses properly vaccinated prior to an outbreak occurring will not contract the disease. In spite of this disease being ideal for the practice of preventive medicine, unfortunately the opportunity has not been grasped, with the result that the disease has developed mainly, where as the disease could perhaps have been completely controlled had vaccine been used regularly.

After the extensive outbreak of 1937, stock owners were greatly alarmed, with the result that, in the fall of 1938, some 450,000 horses were vaccinated in the Province of Saskatchewan alone. Whether or not this program had any bearing on the incidence of the disease that year, it is difficult to say, but it is known that those which did were confined to non-vaccinated animals. Because of this, the disease has been almost entirely controlled, but there was not the same keen interest in vaccination the spring following, and as that year, and although isolated cases developed throughout the Province, there was nothing approaching an epidemic.

After comparative freedom from the disease for two years, many were of the opinion that further vaccination was unnecessary and very little was done in the spring of 1941. With the coming autumn, however, an outbreak commenced in the middle of June, cases being recognized in a number of districts. Since manufacturing of vaccine had been stopped in the spring, vaccination, large stocks were in short supply in the year, and the outbreak occurred most of this vaccine was out-dated and of no value. Owing to an extensive outbreak in the United States, American consignment of vaccine had been stopped, and shipments of new vaccine and, because of this, the outbreak was in short supply throughout western Canada.

As that many horses as possible were vaccinated, the Department of Veterinary Science at the University of Saskatchewan increased production and distributed sufficient vaccine to meet the outbreak. In connection with this, a great deal of difficulty was much accentuated on the part of the staff of the Department who worked long hours throughout the summer.

That such an unfortunate situation may not arise the year, I strongly urge stock owners to vaccinate their animals in April or May; do not wait until an outbreak occurs, but loss by death of one or two horses is much greater than the cost of an outlay for the protection of a fair sized stud, or for the purchase of a horse of sufficient value to make the loss. In many instances last year, farmers waited until the disease actually appeared in their district, and many until it appeared in their stud, before taking any action. It should be realized that horses may be necessary for the carrying on of our agricultural pursuits; mechanical power may be extremely difficult to secure and the consumption of fuel may be further curtailed at any time. The farmer who depends entirely on truck and tractor power may be in a very precarious position and it seems to be economically sound to protect every available horse. Not only should work horses be vaccinated; young animals should be vaccinated as well since they may be absolutely essential in the future to do work on farms, or to take the place of delivery trucks in cities, which very shortly may be off the streets.

During the years encephalomyelitis was common among horses in Saskatchewan, physicians reported an increasing number of cases of encephalitis in man, and the question arose as to whether or not there was a relationship between the two infections. In 1938, the year the disease was so prevalent in horses, 100 cases were recognized in man and, during the following year, we isolated the equine virus from three human cases. Just prior to this discovery, workers in the United States also found that man was susceptible to the virus of the horse virus.

Although it was definitely shown that man could contract the horse disease as a result, people had actually died in Saskatchewan, little interest was taken in the matter until last year when the most extensive human epidemic ever recorded occurred in the northern States, Manitoba and Saskatchewan. During the course of this outbreak, we were successful in isolating the virus or germ from two cases, and later proved by blood tests that the entire outbreak was due to the same germ as equine encephalomyelitis. In Saskatchewan alone, 550 persons contracted the disease, eight per cent of these died.

To state that horses were responsible for the human epidemic would be untrue because of our limited knowledge of how the human infection occurs. It is true, however, that the elimination of this disease in the horse—undoubtedly a virus reservoir

gauche, saturated with rubbing alcohol, cleanse the point of injection and the prepared area of the neck again.

6. After using the needle, place it in a small vessel, such as an egg cup, containing rubbing alcohol where it should remain until required again for the next operation.

7. Repeat the rubbing alcohol out of the needle before using it again; this can be done best by (a) pulling the plunger of the syringe half way up, (b) attaching the needle, and (c) blowing the alcohol out.

8. Be sure to handle the needle properly by the base, not by the point, so as not to contaminate the part to be introduced beneath the skin.

9. Chick vaccine must be kept at ice box temperature (from 35 to 40 degrees F.) until preparations for using it are completed; it loses its effectiveness quickly when kept at higher temperatures.

It should be understood that the vaccine supply may be limited because there will be but three sources of supply for Canada this year—the Lederle Company, New York; the Cutter Company, California; and the Department of Veterinary Science, University of Saskatchewan, Saskatoon. The Department of Veterinary Science has already prepared considerable quantities and will continue to do so until the demand is taken care of. These vaccines may be bought at drug stores and other stores that handle drug supplies.

## Hope Springs Eternal

Dr. H. Frederick, rounding out the year as a barber in Hope, B.C., offered this observation: "I've never yet seen a bald head on which hair could be made to grow, but I've never seen a man baldheaded who could be convinced of it, either."

## To Economize Labor

Among other suggestions made by the Dominion Experimental Farms to economize labor, shallow plowing is said to give good results. Over a period of years on different soil types and on different rotations shallow furrow may be safely adopted.

## The Time Flowers

The day fly, four o'clock, evening primrose, century plant, morning glory, evening star and night-blooming cereus, all mention time by their names.

Amongst those thousands of girls who are out to win the war, a goodly percentage are sure to win a warrior.

Mud is the name of a West Virginia town. 2456

## WE ALWAYS APPRECIATE THEM

Most of our business is in printing letterheads, envelopes, circulars, posters, office forms, and other small orders.

We appreciate a small order as well as we do a big one.

So, if you have any small orders for printing we want you to know that we are glad to get them. We appreciate them just as much—and take just as good care of them—as if they actually amounted to hundreds of dollars.

## The Gleichen Call

### Crop Production Programme for the PRAIRIE PROVINCES, 1942

#### Canada's War Requirements Call for:

A production of wheat limited to what can be sold in the domestic and export markets during crop year 1942-43.  
An unlimited production of coarse grains for live stock feeding to produce... the Animal Products and Fats needed in the Domestic Market.  
...the Bacon, Dairy Products and Eggs Wanted by Britain.  
A greatly increased production of Flaxseed to meet Vegetable Oil Needs of Canada and the United States in view of War Developments.

#### GRAIN MARKETING POLICY

WHEAT—Deliveries to remain limited: Price to be increased.

Authorized deliveries: 80 million bu. from Western Canada as compared with 250 million bu. authorized from all "cans" last year. This 250 million bu. is believed all that can be marketed in the 1942-43 crop year, and the expected carryover of 450 million bu. at July 31, 1942, will constitute an adequate war reserve. Individual deliveries will again be determined on a quota basis.

Price: The initial price for deliveries in 1942-43 under authorized quotas will be 90 cents per bu., basis No. 1 Northern in store Fort William, Fort Arthur or Vancouver. This 20 cents price increase plus higher authorized deliveries considerably enhances the wheat outlook for 1942-43 as compared with that of 1941-42. Note: Higher delivery price of wheat not to effect the price of bread in Canada.)

COARSE GRAINS—Unlimited production.

Price: To safeguard the position of farmers who increase their production of barley and oats.

a. A minimum price is established for barley at 40 cents basis No. 2 C. W. G. low in store Fort William-Fort Arthur.

b. A minimum price is established for oats at 45 cents basis No. 2 C. W. in store Fort William-Fort Arthur.

In connection with barley and oats prices the Canadian Wheat Board is empowered to carry out the policy.

FLAXSEED—Unlimited production.

Price: A fixed price is established for flaxseed at \$2.25 basis No. 1 C. W. in store Fort William-Fort Arthur. Canadian Wheat Board empowered to purchase and handle all flaxseed delivered by producers in Canada during the crop year 1942-43.

War Requirements Call for More Hogs, More Milk, More Beef, More Wool, More Eggs, More Fats and Oils in 1942

HELP WIN THE WAR BY PRODUCING THOSE CROPS THAT ARE URGENTLY NEEDED IN OUR 1942 WAR EFFORT

This Means Particularly More Barley and Flaxseed

AGRICULTURAL SUPPLIES BOARD  
DOMINION DEPARTMENT OF AGRICULTURE

HONOURABLE J. G. GARDINER,  
Minister

G. S. H. BARTON,  
Deputy Minister

(Continued from page 1)

#### THE WEEK IN EDMONTON

ment expert, every farm should maintain one or two colonies of bees, not only to assist the nation in times of sugar scarcity, but to maintain Canadian stocks of bees. He said there was a possibility of shortage among imported stocks, and new beekeepers should be encouraged to start immediately.

Returning from an inspection tour of the provincial highway system Hon. W. A. Fallow announced that a 22-mile link on the Jasper highway between Vermilion and Lloydminster will be completed early in the season. The new project will bring a road between Vermilion and Lloydminster six and a half miles shorter and much better than the existing road. He also said that a new gravel pit found near Vermilion will prove valuable in reducing construction costs. The minister and his deputy are making additional tours to determine work for the coming season.

Employment of Drumbrell miners on the Alaska Highway during their off season was urged by Gordon E. Taylor, M.L.A. for the coal city following a three day air trip to Fort St. John, base of U. S. road operations. Mr. Taylor told officials that the 200 Drumbrell men were ready to take jobs on air ports or roads if the vacancies were opened to them. "While no definite arrangements were made I was well received by officials," said the member.

Alberta proceedings against tobacco manufacturers and certain others in the trade are not completed and this week application for leave to appeal against an Alberta appeal court decision was made in Montreal. Last July after extensive hearings, the 25 defendants were convicted of combine offences and were fined a total of \$205,500. The convictions were quashed February 5 and on March 11 an application for leave to appeal was dismissed by the Alberta

appeal court. The case is now to go to the Supreme Court of Canada if the present application is allowed.

Although there have been reports that the Canadian National Railway plans extensive development in the Vermilion oil field, the provincial government has no official word of the matter. This was made clear by Hon. N. E. Tanner, minister of lands and mines, when queried this week. Federal engineers have obtained some detailed information, but the department is aware of no other developments to date.

The provincial government is willing to enter into an agreement of co-operation with B.C. in any plan to evacuate Japanese from the coast province to this, according to Premier Aberhart, but lacking details it was impossible to make any commitment. The premier refused to a legislative resolution passed at the recent session which urged that Japan brought into Alberta be held under federal supervision and removed at the end of the war.

(Continued from page 1)

#### NATIONAL PARKS

of those who first conceived the idea of the great national museums of wild life. These parks are in the vast possible position to preserve wildlife because their purpose is to preserve preconditions the whole complex of earth and water, hill and forest and plain rock and snow that go to make up a park. As long as the national parks are kept as wildlife sanctuaries they will continue to present a fairer picture of a primeval Canada and afford Canadians a chance to enrich their experience by unforgettable encounters with primitive nature.

A stoker's letter to his family was responsible for the sinking by enemy action of several British ships in convoy. The letter was written in a simple code to let his family know where he was and when to expect him home. The letter read: "Don't forget to wish Aunt Hatty at Liverpool many happy returns of the day on the thirteenth. Or is her birthday the fifteenth. And give the twins Sam and Annie, my love." It meant that "he was due to arrive in Liverpool on the thirteenth or fifteenth of the month and that he was then in South America—initials of the "twins," Sam and Annie. His family understood since the code was pre-arranged. The censor, with hundreds of letters to go through accepted it at its face value and passed the letter for despatch to England. The Nazi officer of the German raider which attacked the mail boat was looking for anything in the letters which might connect with ship movements. The decoding of the message was easy for them. The stokers ship subsequently joined a convoy and ran into a nest of U-boats. Several ships were sunk. This is only one such case of many in recent months. Stenon continues to send coded letters home not realizing that the information they give, with the sole intention of relieving their families' anxiety, can give vital information to the enemy.
